

# Full Stack Course

## Crash Course to HTML/CSS

First I would watch this Crash Course video, it's done pretty well and VS Code is definitely the Text Editor that you should be using:

<https://www.youtube.com/watch?v=8gNrZ4lAnAw>

## Diving into Javascript

Then do **all** the **Javascript Fundamentals**, to get familiar with Javascript, but don't do the Advanced Javascript tutorials yet..

<https://www.guru99.com/interactive-javascript-tutorials.html>

## Getting down with Git

Before moving any further you should learn how to use git with GitHub to create a repo and store your code. It's good practice to learn revision control and share your code, so I can help in the future.
